

2018 DataHaven Community Wellbeing Survey

Statewide Connecticut Crosstabs

Results Overview

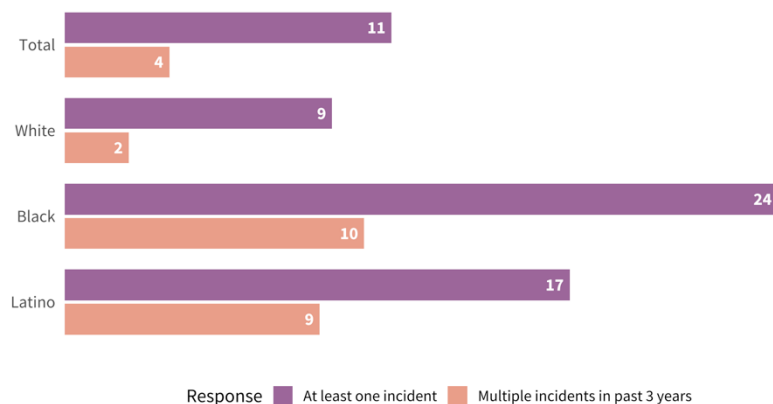

These crosstabs contain data collected through the 2018 DataHaven Community Wellbeing Survey's live, in-depth interviews with 16,043 individuals statewide. The survey assessed topics such as health, employment, and neighborhood resources. Respondents spanned a broad range of ages, ethnicities, and socioeconomic statuses from every Connecticut zip code, and all results are based on weighting survey data to be representative of the entire adult population (see methodology). Data collected at this level reveal local trends in quality of life, including these examples:

Local government can improve by continuing to listen to constituents: Eighty-one percent of adults are satisfied with the area in which they live, with the majority citing recreational facilities, safety, and trustworthy neighbors as perks of their communities. People were more ambivalent about local government: Fewer than half reported that their local government's responsiveness was good or excellent. But 70 percent felt they were able to influence government decision-making at least a little, and this was a 10 percentage-point increase from the last iteration of the DataHaven survey in 2015, suggesting that trust in local civic engagement is on the rise.

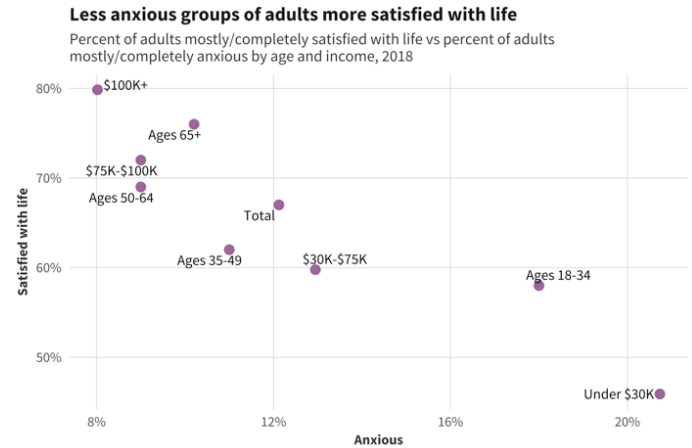

Experiences with the police vary by race: Black and Latino adults in Connecticut are much less favorable about the police than white adults. Only 58 percent and 66 percent of black and Latino adults, respectively, said the local police are doing a good or excellent job, compared to 78 percent of white adults. This may stem from these communities' interactions with the police force: Compared to whites (2%), nearly five times as many Latino (9%) and black (10%) individuals reported they experienced unfair or abusive treatment by the police multiple times in the past 3 years.

Black and Latino adults disproportionately experience negative encounters with police

Percent of adults reporting unfair police stops, searches, or other mistreatment, and frequency of incidents, by race, 2018

Life satisfaction is declining: Sixty-seven percent of adults reported feeling at least somewhat satisfied with their life, a five-point decrease from the 2015 survey that was accompanied by an increase in the percentage of adults reporting anxiety within the past day. A number of factors could be contributing to this stress: Fourteen percent of Connecticut adults reported their health as "fair" or "poor," and 33 percent were just getting by or finding it difficult to manage financially.

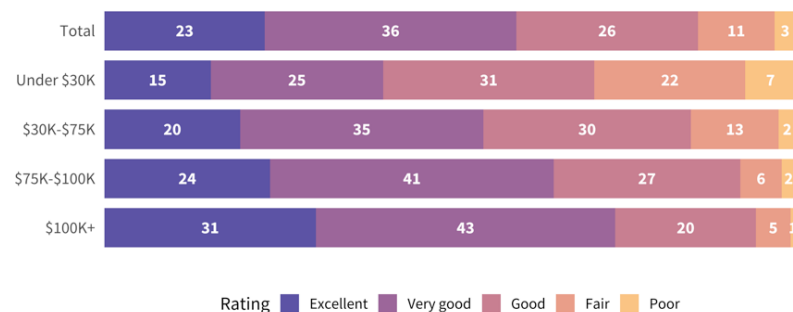

Access to sufficient nutritious food is inequitable: Food insecurity burdens some groups more than others: thirteen percent of adults reported food insecurity, a figure that increased to 23% and 28% among black and Hispanic adults, respectively. And access is an issue: 58% of Hispanic or black adults reported good or excellent access to affordable fresh fruits and vegetables in their neighborhood, versus 76% of whites.

Higher-earning adults report better health: Among individuals with annual incomes greater than \$100,000, 31% reported excellent health, compared to 15% reporting the same among individuals with incomes below \$30,000. Every health condition included on the survey was more prevalent in lower-income respondents, including obesity, hypertension, diabetes, heart disease/heart attack, and asthma.

High-income adults rate their health more highly

Responses to self-rated health by income; percent of adults, 2018

How To Read This Document

The data in these crosstabs represent question-by-question weighted estimates, disaggregated by various demographic and socioeconomic characteristics. Each estimate represents how a group of respondents—weighted to be representative of the population within the specified geographic area—answered the question shown.

Please use caution in interpreting the information here, and consider the limitations of the populations from which the data was collected. In particular, please be aware of “skip patterns” in the survey, such as *“Q23E1. (If still have asthma) During the past 30 days, how often have you used a prescription asthma inhaler during an asthma attack to stop it?”* Only the subset of adults who indicated in the previous two questions that they had been diagnosed with asthma and still have it would have been eligible to receive this question. Therefore, the estimates show the percentages of adults with “current asthma” who have used inhalers, not the percentages of all adults who have used them.

The number of respondents to any given question is represented by “Weighted Total.” For example, many questions were answered by all 16,043 respondents, so in the Connecticut column you will see a Weighted Total of 16,043. But the columns for each smaller population group (e.g., adults age 18-34) or the columns for questions that were asked only to a subset of adults will have smaller weighted totals. Generally, columns with demographic breakdowns are only included when the number of respondents completing that item was at least 50. Additionally, some questions were asked to special groupings of respondents or “ballots.” Respondents were randomly-assigned to one of three statewide ballots (split 45%, 45%, and 10%) at the outset of the survey. For these questions (e.g., Q5, asked to 10% of adults, giving a Weighted Total of 1,657 people), weighted totals are generally smaller than they are for the questions that were asked to 100% of eligible respondents.

We recommend contacting DataHaven with any questions. DataHaven is happy to help you confirm whether the information in this document is being interpreted in a correct way, and possibly to recommend further analysis that might be useful to your work.

Methodology

The DataHaven Community Wellbeing Survey was designed by DataHaven in consultation with over 100 local, statewide, and national survey research experts and local partners, in many cases drawing upon questions commonly used in other surveys.

On behalf of DataHaven, the Siena College Research Institute (SRI) conducted the survey of 16,043 residents of the state of Connecticut (additional surveys were also completed in parts of New York State, but are not included in these estimates). Surveys were conducted from March 6 through November 29, 2018. Residents age 18 and older were interviewed from all 169 towns in Connecticut. Interviews were conducted in English and Spanish. The overall Connecticut sample of 16,043 was weighted by age, gender, reported race, and geography to ensure that it was statistically representative of the area’s demographics. In addition to demographic parameters, the Connecticut statewide sample was also weighted to match current patterns of telephone status (landline only,

cell phone only or both), based on the state-level estimates from the National Health Interview Survey.

Respondents were contacted via landline or cell phone. To ensure the selection of both listed and unlisted telephone numbers, the design of the sample incorporated random digit dialing (RDD). The cell phone sample was drawn from a sample of dedicated wireless telephone exchanges from within Connecticut. Approximately 1/3 of residents completed the survey on a cell phone. In addition to the traditional RDD samples for landline and cell, we augmented the sample using a stratified sampling technique. These stratified samples maintained RDD for both landline and cell but used information from the U.S. Census so as to enhance the composition of the sample, including targeted regions, urban centers, and high concentrations of minority populations. The primary supplier of the RDD landline and cell phone samples was Survey Sampling International (SSI) of Shelton, Connecticut. Additionally, for the cell phone sample we utilized SSI’s Wireless LITe database which uses billing address to enable the targeting of cell phone sample by region or zip code. This database also permitted the inclusion of non-Connecticut telephone numbers as someone may have moved and their billing address is in the area but their cell phone number is not a ‘typical’ Connecticut telephone number (i.e., not a 203, 860 area code). All of these respondents were screened by live interviewers to confirm their residence in a qualifying town and zip code before interviews continued.

Reported Margins of Error

Margins of error are shown at the top of the crosstab. The “maximum” margin of error for the Connecticut sample of 16,043 adults is +/- 1.0% with a 95% confidence interval, including the design effects resulting from weighting. This means that in 95 out of every 100 samples of the same size and type, the results that we obtain would never vary by more than plus or minus 1.0 percentage points from the result that we would get if we could interview every single member of the adult population of Connecticut. This maximum margin of error applies when an observed percentage is 50%, and the margin of error becomes smaller as the percentage approaches the extremes of 0% or 100%. Margins of error are higher for small geographic or population groups.

Contact Us

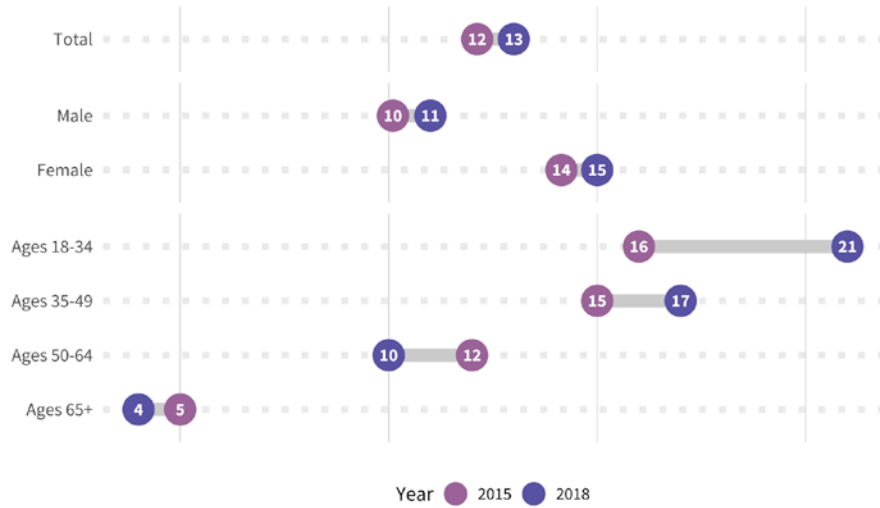

As a non-profit organization with a 25-year history of public service to Connecticut, DataHaven has a mission to help drive community action that improves quality of life. One way of doing so is by ensuring that data from this survey, as well as from other public data sources, are useful and accessible to the public. Contact us via email at info@ctdatahaven.org or via our website (<http://ctdatahaven.org/contact>). Extensive additional survey results are posted on our website.

Younger adults and women face high food insecurity

Percent of adults reporting food insecurity by age and sex, 2015-2018

Anxiety has jumped among younger and middle-income adults

Percent of adults mostly or completely anxious yesterday by age and income, 2015-2018

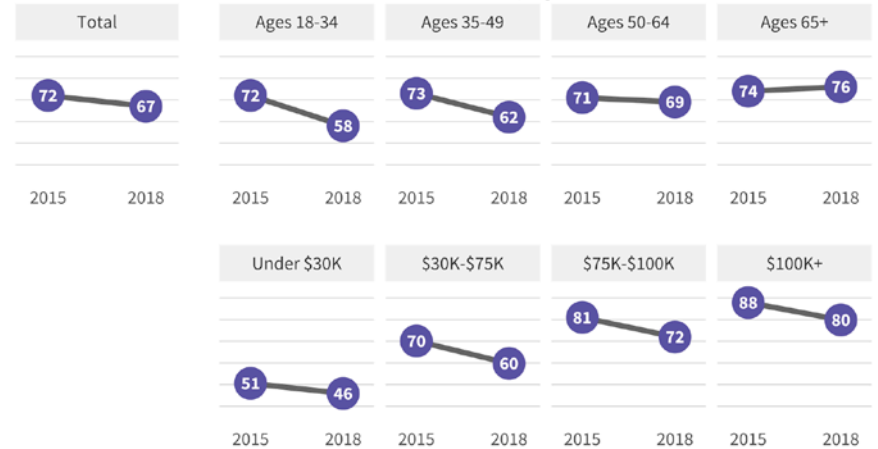

More adults feel some influence over local government than in 2015

Percent of adults reporting at least a little influence over local government by gender and education, 2015-2018

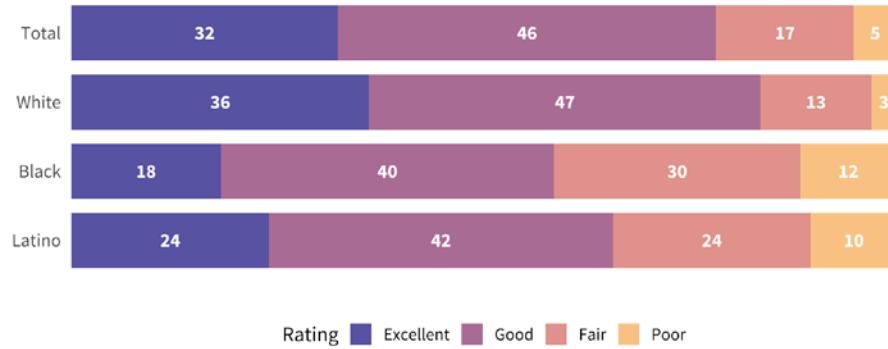

Life satisfaction is declining, particularly for younger and lower-income adults

Percent of adults mostly or completely satisfied with life by age and income, 2015-2018

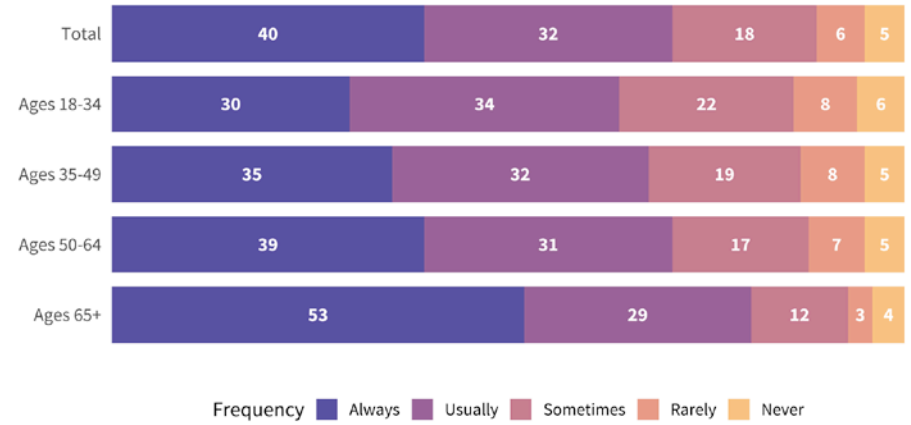

Black and Latino residents rate police far less favorably

Responses to job done by local police by race; percent of adults, 2018

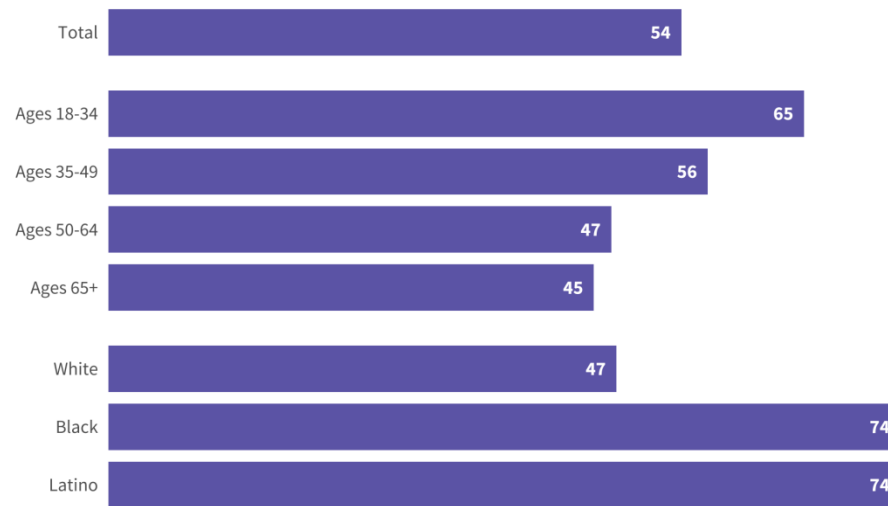

Older adults more likely to feel emotionally supported

Frequency of having needed social & emotional support by age; percent of adults, 2018

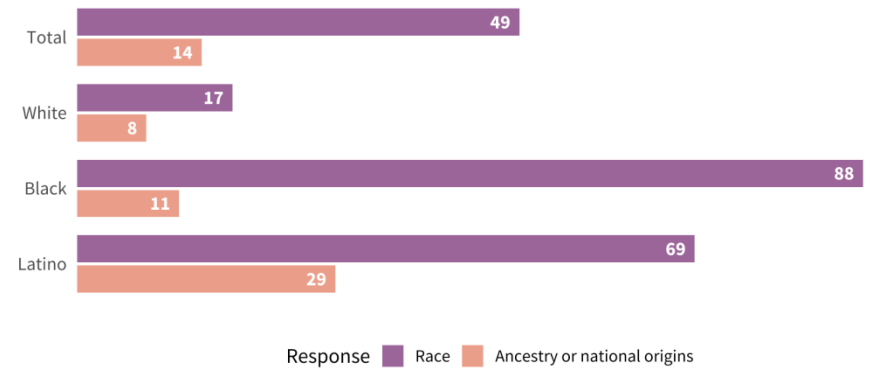

More walkable amenities for younger adults, Black and Latino adults

Percent of adults with stores, etc. in walking distance by age and race, 2018

Black and Latino adults often attribute police stops to race and/or origin

Of adults experiencing unfair police stops, reasons believed for stops; percent of adults by race, 2018

Note: Participants may have selected more than one category

(If under 65 years old) The next few questions are about the national health problem of H.I.V., the virus that causes AIDS. Please remember that your answers are strictly confidential and that you don't have to answer every question if you do not want to. Although we will ask you about testing, we will not ask you about the results of any test you may have had. Have you ever been tested for H.I.V.?

I have a few questions about prescription painkillers. When we ask about prescription painkillers, we mean strong ones, sometimes called opioids, such as Percocet, OxyContin or Vicodin. Let me remind you that this is a completely confidential interview. Do you personally know anyone who has struggled with misuse or addiction to heroin or other opiates such as prescription painkillers at any point during the last 3 years?

In the following questions, we are interested in the way other people have treated you or your beliefs about how other people have treated you. Can you tell me if any of the following has ever happened to you:

At any time in your life, have you ever been unfairly fired, unfairly denied a promotion or raise, or not hired for a job for unfair reasons?

	Gender			Age				Race/Ethnicity			Education			Income						Children in HH			
	Total	M	F	18-34	35-49	50-64	65+	White	Black/Afr Amer	Hispanic	High School or less	Some college or Associate's	Bachelor's or higher	<\$15K	\$15K-\$30K	\$30K-\$50K	\$50K-\$75K	\$75K-100K	\$100K-\$200K	\$200K+	No	Yes
