

# 2018 DataHaven Community Wellbeing Survey

## Hamden Crosstabs

### How To Read This Document

The 2018 DataHaven Community Wellbeing Survey conducted live, in-depth interviews with 16,043 individuals statewide, including 292 from Hamden. The data in these crosstabs represent question-by-question weighted estimates, disaggregated by various demographic and socioeconomic characteristics. Each estimate represents how a group of respondents—weighted to be representative of the population in the specified area—answered the question shown.

Please use caution in interpreting the information here; in particular, please be aware of “skip patterns” in the survey, such as “Q23E1. (If still have asthma) During the past 30 days, how often have you used a prescription asthma inhaler during an asthma attack to stop it?” Only the subset of adults who indicated in the previous two questions that they had been diagnosed with asthma and still have it would have been eligible to receive this question. Therefore, the estimates show the percentages of adults with “current asthma” who have used inhalers, not the percentages of all adults who have used them.

The number of respondents to any given question is represented by “Weighted Total.” For example, many questions were answered by all 292 Hamden respondents, for a Hamden Weighted Total of 292. But the columns for each smaller population group (e.g., adults age 18-34) or for questions that were asked only to a subset of adults will have smaller weighted totals. Generally, columns with demographic breakdowns are only included when there are at least 50 individuals in that category. Additionally, some questions were asked to special groupings of respondents or “ballots.” Respondents were randomly-assigned to one of three statewide ballots (split 45%, 45%, and 10%) at the outset of the survey. For these questions (e.g., question LIFECA, asked to 45% of adults, giving a Weighted Total of 138 people), weighted totals are generally smaller than they are for the questions that were asked to 100% of eligible respondents.

We recommend contacting DataHaven with any questions. DataHaven is happy to help you confirm correct interpretation of the information in this document, and possibly to recommend further analysis that might be useful to your work.

### Methodology

The DataHaven Community Wellbeing Survey was designed by DataHaven in consultation with over 100 local, statewide, and national survey research experts and local partners, in many cases drawing upon questions commonly used in other surveys.

On behalf of DataHaven, the Siena College Research Institute (SRI) conducted the survey of 16,043 residents of the state of Connecticut, including 292 from Hamden (additional surveys were also completed in parts of New York State, but are not included in these estimates). Surveys were conducted from March 6 through November 29, 2018. Residents age 18 and older were interviewed from all 169 towns in Connecticut. Interviews were conducted in English and Spanish. The overall Connecticut sample of 16,043 and the Hamden sample of 292 were weighted by age, gender, reported race,

and geography to ensure that they were statistically representative of the area’s demographics. In addition to demographic parameters, the samples were also weighted to match current patterns of telephone status (landline only, cell phone only or both), based on the state-level estimates from the National Health Interview Survey.

Respondents were contacted via landline or cell phone. To ensure the selection of both listed and unlisted numbers, the sample design incorporated random digit dialing (RDD). The cell phone sample was drawn from a sample of dedicated wireless telephone exchanges from within Connecticut. Approximately 1/3 of residents completed the survey on a cell phone. In addition to the traditional RDD samples for landline and cell, we augmented the sample using a stratified sampling technique. These stratified samples maintained RDD for both landline and cell but used information from the U.S. Census so as to enhance the composition of the sample, including targeted regions, urban centers, and high concentrations of minority populations. The primary supplier of the RDD landline and cell phone samples was Survey Sampling International (SSI) of Shelton, Connecticut. Additionally, for the cell phone sample we utilized SSI’s Wireless LITE database which uses billing address to enable the targeting of cell phone sample by region or zip code. This database also permitted the inclusion of non-Connecticut telephone numbers as someone may have moved and their billing address is in the area but their cell phone number is not a ‘typical’ Connecticut telephone number (i.e., not a 203, 860 area code). All of these respondents were screened by live interviewers to confirm their residence in a qualifying town and zip code before interviews continued.

### Reported Margins of Error

Margins of error are shown at the top of the crosstab. The “maximum” margin of error for the Hamden sample of 292 adults is +/- 7.0% with a 95% confidence interval, including the design effects resulting from weighting. This means that in 95 out of every 100 samples of the same size and type, the results that we obtain would never vary by more than +/- 7.0 percentage points from the result if we could interview every single member of the adult population of Connecticut. This margin of error applies when an observed percentage is 50%, and the margin of error becomes smaller as the percentage approaches the extremes of 0% or 100%. Margins of error are higher for small groups.

### Contact Us

As a non-profit organization with a 25-year history of public service to Connecticut, DataHaven has a mission to help drive community action that improves quality of life. One way of doing so is by ensuring that data from this survey, as well as from other public data sources, are useful and accessible to the public. Contact us via email at [info@ctdatahaven.org](mailto:info@ctdatahaven.org) or via our website (<http://ctdatahaven.org/contact>). Extensive additional survey results are posted on our website.
